Effecting real change to realise the global energy transformation

The energy sector is the single biggest contributor to climate change, yet energy is vital to maintaining our way of life.

“ Achieving an efficient and sustainable energy transition is one of the greatest challenges of our generation.

Unless we are able to move beyond pledges to the delivery of the projects and investments we need, we will not address the climate crisis.

This challenge can be met but it will require a renewed sense of purpose and effective partnerships between governments and the private sector. Governments need to show leadership, set the policy direction, and develop the frameworks to enable private investment to flow, whilst the private sector must come forward with the innovation and finance.

By building fresh partnerships between governments, the energy industry, and the major sectors within manufacturing, we can bring about measurable change. The Global Energy Transition Congress & Exhibition will bring together international partners to turn promises into actions.

This is why I am pleased to be speaking at the Global Energy Transition Congress & Exhibition. ”

RT Hon Tony Blair

Former Prime Minister of Great Britain and Northern Ireland

Global Energy Transition Strategic Conference

speakers include:

Rt Hon Tony Blair
Former Prime Minister
**Great Britain and
Northern Ireland**

Hon. Gilberto Pichetto Fratin
Minister of Environment
and Energy Security
Italy

Hon. Adolfo Urso
Minister of Enterprises and
Made In Italy
Italy

H.E. Tarek El Molla
Minister of Petroleum and
Mineral Resources
Egypt

H.E. Musadik Malik
Minister of Energy
Pakistan

H.E. Parviz Shahbazov
Minister of Energy
Azerbaijan

H.E. Carlos Joaquim Zacarias
Minister of Mineral Resources
and Energy
Mozambique

Hon. Christopher Keikura Vandy
Chairman of the Parliamentary
Energy Committee
Sierra Leone

Ambassador Patricia Espinosa
Formerly Executive Secretary
**United Nations Framework Convention
on Climate Change**

James Appathurai
Deputy Assistant Secretary General
for Innovation, Hybrid and Cyber
NATO

Dame Susan Rice DBE
Chair of Global Steering Group
GEFI

Hon. Willie L. Phillips
Chairman
FERC

Hon. Mark W. Menezes
President & CEO
United States Energy Agency

Katarzyna Piquette
Associate Deputy Minister -
Intergovernmental Relations
Government of Alberta

Lord John Browne
Chairman
BeyondNetZero

Sanjiv Lamba
CEO
Linde

Lorenzo Simonelli
Chairman and CEO
Baker Hughes

Yoshinori Kanehana
Chairman
Kawasaki Heavy Industries Ltd

Alessandro Puliti
CEO and GM
Saipem

Javier Cavada
President and CEO – EMEA Region
Mitsubishi Power

Christina Verchere
CEO and President
OMV Petrom

Arnaud Pieton
CEO
Technip Energies

Alessandro Bernini
CEO
MAIRE

Dr. Philip Mshelbila
MD and CEO
Nigeria LNG Ltd

Håkan Agnevall
President and CEO
Wärtsilä Corporation

Marco Alvera
Co-founder and CEO
TES

Meiltje De Groot
CEO
Groningen Airport Eelde

Matt Chandler
President of LNG Market
Development
ExxonMobil

Musabbeh Al Kaabi
Executive Director of Low Carbon
Solutions & International Growth
**ADNOC, Chairman of the Board
Mubadala Energy**

Joseph McMonigle
Secretary General
International Energy Forum (IEF)

GET Strategic Conference speakers continued:

Bjørn Otto Sverdrup
Chair, OGCI Executive Committee

About the Global Energy Transition Congress

Over three days, the GET Congress and Exhibition will bring together international energy ministers, CEOs, and energy transition experts from across the energy value chain and carbon intensive industries. This community of experts will share tangible, scalable and pragmatic approaches to accelerating the energy transition.

GET the bigger picture

The **Strategic Conference programme** has been curated with our knowledge partners BCG and Wood Mackenzie and with the guidance of our Steering Committee. The programme includes the opening ceremony, keynote addresses, ministers in conversation and CEO-lead panels. With contributions from executive leaders from multiple industries, investors and entrepreneurs, these discussions will inspire authentic action on the energy transition.

GET into the detail

The **Roadmaps to Net Zero Conference** is the result of our international call for papers which received over 500 submissions from over 50 countries. These were analysed by our selection committee and the highest ranked papers will be presented during this three-day programme. They outline pragmatic roadmaps for a new, sustainable energy system-of-systems and examine potential obstacles to success and proven means of navigating the energy transition efficiently and effectively. Sessions will focus on the capital, engineering, science and technology needed to effect change at scale and pace.

GET global ideas

The **Project X-Change Conference** showcases the world's leading multi-stakeholder projects and decarbonisation initiatives. Businesses and organisations from around the world were invited to submit projects for presentation which are already contributing to emissions reductions or have potential to do so, but are awaiting Final Investment Decision. Selected via peer review, these presentations inspire scale-up, replication and adaptation.

GET Congress Strategic themes

Six strategic themes underpin the GET Congress agenda. These themes are highlighted throughout the Strategic Conference programme.

Net zero impasses

Integrating energy transition policy across industries and borders, creating the conditions for targeted capital investment, collaborating on net zero enablement and navigating geopolitical volatility.

Inclusive green growth

Harnessing innovation, capturing economic growth opportunities, reskilling the labour force and easing congestion in supply chains.

Corporate and consumer behaviour change

Bridging the gap between intentions and actions, rewarding climate adaptation in challenging economic times, demanding transparency and managing misinformation.

Sustainability at scale

Accelerating industrial-scale deployment of new technologies and viable low carbon solutions, designing decarbonised market structures, abating global carbon output and laying the foundations of a zero emissions future.

Decarbonisation capital

Financing a multifaceted energy transition, structuring incentives, balancing risk and reward, driving social buy-in and ensuring an inclusive energy transition.

Climate action beyond carbon

Addressing biodiversity loss, realigning economic models for circular and regenerative impact, developing resilient societies and co-creating the economic and energy systems of the future.

GET Strategic Conference Day One

Monday 1 July 2024

GET Congress 2024 Opening Ceremony

| | | |
|-------------|--|-----------------|
| 10:00-10:10 | Official welcome to the inaugural Global Energy Transition Congress & Exhibition | Plenary Theatre |
|-------------|--|-----------------|

| | | |
|-------------|--|-----------------|
| 10:10-10:15 | Ministerial welcome address: Putting Italy at the heart of multilateral energy co-operation efforts in Europe and beyond | Plenary Theatre |
|-------------|--|-----------------|

Speaker:

Hon. Gilberto Pichetto Fratin
Minister of Environment
and Energy Security
Italy

Azerbaijan

Moderator:

John Defterios
Professor of Business
NYU, Abu Dhabi

11:00-11:45

Global Energy Transition Changemakers programme

Plenary Theatre

Coherent international action on the energy transition

Global decarbonisation requires widespread, nonpartisan engagement and evidence-based action, with COP 28's "UAE consensus" marking a significant commitment to transitioning away from fossil fuels to achieve net zero emissions by 2050. Effective communication across sectors has been crucial in developing inclusive net zero roadmaps, as policymakers balance national interests with coordinated global climate action.

Panellists:

H.E. Eng. Tarek El Molla
Minister of Petroleum & Mineral
Resources
Egypt

H.E. Musadik Malik
Minister of Energy
Pakistan

H.E. Carlos Joaquim Zacarias

Emboldening industries and accelerating the energy transition: Striking the right balance on the lower carbon future

Climate policy varies globally, with the USA and India focusing on incentives for lower carbon activities, while the EU uses a mix of incentives and regulation, highlighting a “carrot or stick” dilemma. Legislators must balance market incentives and regulatory frameworks to promote low-carbon transitions without increasing costs, while also considering the differing priorities of the Global North and South and the challenges of tight international monetary conditions.

Panellists:

Sanjiv Lamba
CEO

Geopolitics, energy security and new challenges to net zero

The international community faces intertwined challenges of global conflict, competing geostrategic priorities, resource demand, and the unpredictable future of machine learning, with digitalisation enhancing energy system efficiency and consumer choices. However, cybersecurity threats from hostile actors are a growing concern, highlighting the inextricable link between the global energy transition and geopolitical issues.

14:00-14:45

Global Energy Transition in Action programme

Plenary Theatre

In focus: The energy transition in Europe

The EU aims to become the first climate-neutral continent by building on three decades of climate progress, achieving a 24% reduction in GHG emissions from 1990 to 2020, and implementing the comprehensive EU Green Deal. The Fit for 55 package, finalised in 2023, outlines a plan for a 55% emissions reduction by 2030, but maintaining unity among member states amid challenges like sluggish growth and the Ukraine war, and the upcoming June elections, will be crucial.

Panellists:

US supply, European demand: What and where now for global LNG markets?

The role of LNG in Europe's energy system was reconsidered after the Ukraine invasion disrupted gas supplies, leading to increased LNG imports and record high global coal demand in 2023. However, the US moratorium on new LNG exports announced in January 2024, due to net zero commitments and domestic energy price concerns, has raised fears of new price volatility, prompting a reevaluation of global LNG market dynamics

15:30-16:15

Global Energy Transition Changemakers programme

Plenary Theatre

Decarbonising the global hydrogen value chain

Hydrogen production remains highly carbon-intensive, with over 80% of 2022 output derived from coal and CCUS-free natural gas, while green hydrogen constituted only 0.1% of total production. Despite increasing international focus and over 50 national hydrogen strategies, clean hydrogen projects face significant financial challenges and market inconsistencies, though recent landmark announcements offer hope for affordable, utility-scale production.

Spotlight Theatre

Ambition and reality: Making the business case for lower carbon energy solutions

The UNEP FI estimates climate investment opportunities could reach \$275 trillion by 2050, highlighting significant economic potential despite existing funding gaps and investor hesitation due to high upfront costs and uncertain market conditions. While new oil and gas projects see higher final investment decisions compared to renewables, nuclear projects are increasingly favored, indicating a shift towards fission as a future low-carbon energy source; this session will explore the challenges and opportunities for low-carbon investments post-COP28.

Panellists:

Tim Yeo
Chairman
New Nuclear Watch Institute

16:30-17:15

Global Energy Transition Changemakers programme

Plenary Theatre

Ending energy exclusion as the transition picks up pace

Geopolitical, economic, and demographic challenges in emerging markets complicate the energy transition, as supply bottlenecks, price volatility, and growing energy demand hinder decarbonization efforts in the Global South and East. Despite aims to reduce coal dependency in ASEAN nations, global coal demand rose in 2023, with China, India, and Southeast Asia expected to drive 75% of consumption, intensifying competition for cleaner fuels like LNG and deterring investors from new energy projects.

Panellists:

Ambassador Patricia Espinosa

Spotlight Theatre

Voluntary carbon markets: An evolving mechanism for the global energy transition

The voluntary carbon market offers a breakthrough in emissions reduction by commercializing climate overperformance, creating incentives for companies to go further and reinvest revenues into climate research, potentially fostering a virtuous cycle of success. However, concerns persist about market integrity, with issues such as additionality and transparency needing resolution to realize the market's potential as a driver of both commercial and environmental imperatives in a green economy.

Plenary Theatre

How will generative artificial intelligence unlock critical climate progress?

John Kerry's statement in a 2021 BBC interview, suggesting that yet-to-be-invented technologies could deliver half of the emissions reductions necessary for net zero, underscored the belief that the energy transition will drive and be driven by the fourth industrial revolution. AI's ability to process vast datasets and identify patterns holds promise for solving decarbonization challenges, with initiatives like the Bletchley Declaration on AI Safety potentially facilitating international cooperation to maximize benefits and minimize harms, although concerns about the environmental impact of resource-intensive AI technologies persist.

Accelerating the global skills transition

A European Investment Bank survey in February 2023 highlighted significant net zero skills shortages in the EU, with over 80% of businesses and 60% of public sector organizations reporting obstacles due to a lack of appropriately skilled workers. The evolving global energy mix presents a monumental shift in energy supply and demand, with IRENA estimating the potential creation of 26 million new jobs by the end of the decade, emphasizing the urgent need for collaborative, cross-sectoral efforts to address human capital deficits and unlock opportunities for economic growth and social well-being.

Tackling the oil and gas industry's methane challenge

Methane, the second-largest contributor to global warming after CO2, demands urgent attention, especially from the oil and gas industry responsible for nearly a quarter of human-caused methane emissions. Wood Mackenzie will present recommendations in a critical agenda session to address methane emissions, followed by a panel discussion to evaluate the findings.

Harnessing the power of data for optimised corporate performance, sustainability reporting and value creation

Sustainability reporting is a top priority for businesses due to stakeholder expectations and regulatory demands, but navigating diverse reporting guidelines requires careful data management. Properly compiled and managed data not only aids in performance reporting but also drives performance improvement, offering insights into market trends, operational efficiency, and risk mitigation processes, making data integration a critical component of digital transformation strategies for companies seeking to excel in the energy transition.

Decarbonising the global shipping industry

The shipping sector, responsible for 90% of global trade, faces a critical challenge in reducing its 3% share of global CO2 emissions, highlighting the tension between economic growth and climate action. Despite the International Maritime Organisation's ambitious target of achieving net-zero emissions by 2050, challenges such as diverse vessel types, compliance uncertainties, technology readiness, infrastructure gaps, and funding shortages remain, prompting Lansdowne Moritz to present recommendations for overcoming these obstacles in a Critical Agenda session.

Lower emissions logistics: Energy transition and global supply chains

The UAE Consensus aims to triple renewables and double energy efficiency by 2030, yet faces logistical challenges exacerbated by global supply chain strains and geopolitical events. Fragilities in the clean energy supply chain, including material shortages, geographic concentration, and investor hesitancy, highlight the need for antifragility measures such as the Minerals Security Partnership and the EU Critical Raw Materials Act to ensure a sustainable and diversified global logistics industry.

Do carbon capture technologies have an image problem?

The deployment of carbon capture technologies on a global scale requires infrastructure comparable to the LNG network, necessitating rapid development within a decade and policy interventions akin to those for renewables. However, skepticism persists regarding the effectiveness and ethical implications of carbon capture projects, underscoring the need for debate on their scalability, bankability, and effectiveness in reducing emissions.

Icebreaker One

GET Floorplan

The energy sector and hard-to-abate industries are placed front and centre to demonstrate their solutions to accelerate the energy transition.

The Project X-Change theatre takes centre stage on the exhibition floor and features presentations from multi-stakeholder groups on their ground-breaking decarbonisation projects.

Book a stand today by contacting sales@getcongress.com

GET Congress Delegate Pass

The Global Energy Transition Congress aims to find solutions for the most pressing issues faced by energy leaders. Energy security, alternative energies, low carbon solutions, and climate technologies will feature on the agenda.

Delegates will have unlimited access to three conference programmes as detailed below.

GET Congress pass includes:

Strategic Conference

- ✓ **1 x** Opening Ceremony
- ✓ **5 x** Keynote Addresses
- ✓ **13 x** Changemaker sessions
- ✓ **15 x** Global Energy Transition in Action sessions
- ✓ **4 x** Critical Agenda papers

Roadmaps to Net Zero Conference

- ✓ Curated via a Call for Papers
- ✓ **15 x** Sessions
- ✓ **54 x** Presentations

Project X-Change Conference

- ✓ Curated via a Call for Projects
- ✓ **16 x** Sessions
- ✓ **34 x** Project Showcases

Delegate Pass:

€EUR 2750 + VAT
